# MERNSTACK WEB-DEVELOPER

## OBJECTIVE

I Am a Mern Stack Developer with a vast array of knowledge in frontend and backend end languages responsive frameworks. Aiming to join an organization as a web Developer that encourages creativity and innovation I have 10-month experience in web development and have the vital skills for solving complex problems that will continue to contribute to overall my success as a developer, I have completed several projects some of them are deployed on Vercel and Netlify

## EDUCATION

**Bachelor Information Technology** PMAS ARID University Rawalpindi
**CGPA**:3.50 out of 4
I**ntermediate FSC** FAZIA College Kalar Kahar Federal Board
**Score:**810 out of 1100 percentage:75%
**Materic** Army Public School Ordnance Road Rawalpindi Federal Board
**Score**:884 out of 1050 percentage:85%

## WORK EXPERIENCE

**Data scientist Internship Atomic Energy**
learn phyton language work on software anaconda data training using tensor flow and tensor board Also write a binding

**Bootcamp Mern Stack developer offered by PASHA & Pseb Oct 2022- feb 2023**
Learn important skills required to be a Mern stack developer Html, CSS, React js, redux toolkit, react query Nodejs, MongoDB also complete two full stacks Mern project e-commerce Website, social media website number of another project

**JUNIOR WEB DEVELOPER INTERNSHIP BITSOLTECHNOLOGIE**
work on advanced technologies like react material ui, typescript, backend with nest js, validation through react hook form and yup schema, built completed full stack project library book management system front end with react typescript use react toolkit query for API call and global state management backend with nestJS MongoDB
work with industrial projects fix the bugs and issues Best coding practices

**Remote Job sixsense technologies**
work on a client project social media website query peer work on admin module and authentication module global state management through the redux toolkit sure route also work on chat module

## PROJECTS

**netflix landing page clone**
Design carousel .responsive navbar, bootstrap, also handle theme dark and white through context API, footer designed, gallery section user can watch trailer off,
animation

### E-commerce website TA watchStore( mern project)

- Create a MERN stack project using React for the front end.
- Implement a responsive navbar and carousel for a better user experience.
- Display products on the homepage using cards with transition effects.
- Implement pagination for better navigation through product listings.
- Allow users to click on a product card to view its detail page.
- Product Detail Page show detail about the product
- Cart Management system to add, remove, and update
- Authentication and Registration: Implement user authentication using JWT for secure login and signup process.
- Set up a backend using Node.js and Express for handling API requests.
- Use Bcrypt for password hashing and user authentication.
- Validate inputs on the backend using middleware
- **Cloudinary:** Utilize Cloudinary to store and manage product images
- **MongoDB**: Store user, order, and shipping address data in a database.
- **State Management**: Use the Context API and reducer hook for global state management, RestfulApi
- Provide an order history section for users to check their past orders.

### Ta moviex website

- Use React and React Router Dom for frontend development and navigation.
- Implement an attractive design for a great user experience.
- Utilize **Redux Toolkit** for global state management and a well-organized application structure.
- Create custom hooks for reusable logic and cleaner code.
- Implement lazy loading for images to improve page loading performance.
- Enable infinite scroll to automatically load more movies as the user scrolls down.
- **TMDB API** Integration: Integrate the TMDB API for seamless movie data retrieval.
- **Movie Detail Page**
- Display recommended movies, cast, and similar movies to enrich user experience.
- **Search and Filter:** Provide a search filter for users to find movies of their choice.
- Allow users to filter movies based on genres for easier navigation.
- Sorting:
- **Deployment**: Host the application on Vercel for easy deployment and scalability.

### Book management website(Mern project)

**The core concept:** app using React Mui Grid login signup frontend validation react-hook form redux toolkit query, backend NestJs backend protected routing, use Guards password strategy

### Resturant dummy web app

**The core concept:** app using React Mui layout structure mobile responsiveness sidebar, top navbar, cards, tables, screen ( home, about, gallery, menu, contact) secure routing use react typescript  react hook form for login signup validation, backend NestJs for authentication

### Socialmedia queery peer web App(Full Stack)

- I work on authentication modules for frontend login signup
- work on authentication modules backend apps using  NodeJs  MongoDB
- work on the admin panel,
- work on the chat module
